

ENVIRONMENTAL POLICY

04/10/2017

Windsor provide bespoke, high quality creative design, lithographic and digital print services. As part of our commitment to our customers and a sustainable future, we seek to work to high standards of quality, safety and environmental performance.

Windsor recognise that all activity has an impact on the environment, and seek to protect the environment by treading as lightly as we can.

We support the sourcing of fibre from well-managed forests certified to credible standards or from recycled paper. The Directors of the Company are fully committed to implement and maintain the chain of custody requirements in accordance with the FSC –STD-40-004 version 3-0.

Our certified ISO 14001 environmental management system is used to manage our day-to-day working practices and to set performance targets; working with people – our staff, customers, suppliers and others – to help us understand and improve our environmental performance; adopting suitable technology as it becomes available to us.

Our key commitments are:

- To use resources sustainably
- To reduce the carbon emissions of our service to customers through energy efficiency measures and process change and management
- To understand and manage potential impacts of climate change on our business
- To seek to understand environmental impacts within our supply chain and manage or influence those we can
- To understand and meet or exceed the requirements of relevant environmental legislation, customer requirements and those of interested parties, including pollution prevention and use of FSC papers for our customers' work

We will work steadily to improvement both our management systems and our performance. In particular, we recognise the importance of our staff in achieving our objectives, and provide the training needed to support them.

We communicate this policy to all our staff and those working on our behalf, and review it annually.

Signed on Behalf of the company

Paul Lyward,
Managing Director,
Windsor.
